Conceptual Questions — Module 07: Arrays and Strings

Q1. How is the memory address of element `arr[i][j]` computed in a 2D array `int arr[R][C]` stored in Row-Major order? **Q2.** Why does `char str[5] = "Hello";` fail to compile in C++ (whereas it was allowed in C)? **Q3.** Explain why `sizeof(arr)` inside `void func(int arr[])` returns the size of a pointer instead of the size of the array.
