Programming Questions — Module 12: Operator Overloading

Q11. Write a complete C++23 classroom program defining `class complex_system` with `operator+`, `operator-`, `operator*` (complex multiplication: $(a+bi)(c+di) = (ac - bd) + (ad + bc)i$), `operator==`, and `Show_Num()`.

Q12. Write a complete C++23 classroom program defining a `distance_measure` class (`feet` and `inches`) that overloads binary `+` (normalizing every `12` inches into `1` foot) and `<` (comparing two distances).
