02 associative containers map and set

Detailed Theory, Exact C++ Rules, Memory Models & Exam Reference

02 — Associative Containers (`std::set` and `std::map`)

- `std::set<T>`: Stores **unique** keys in sorted ascending order ($O(\log n)$ insert/find).
- `std::map<K, V>`: Stores sorted **key-value pairs** with unique keys ($O(\log n)$ lookup).
